

Exploratory testing on Monefy app

PLANNING

Oracles:

- I have explored the website to learn about the product: <https://monefy.me/>
- I have watched the video available on Google Play:
<https://play.google.com/store/apps/details?id=com.monefy.app.lite>

Risks:

- It might not be clear how to get started as a new user to application
- There can be a bug which could block to perform operations

Questions:

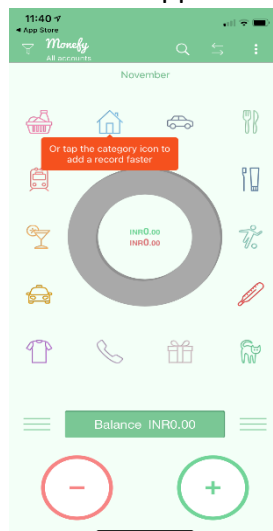

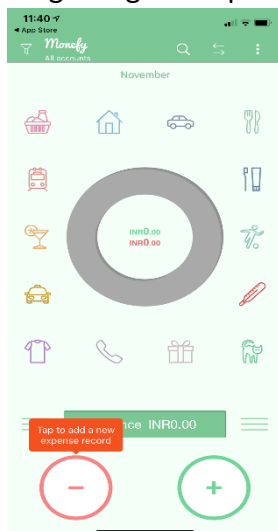

- How easy is it to search in GooglePlay /App Store?
- How does a user add his/her records in application?
- How easy is it to get started?

Setup:

- Download app via GooglePlay /App Store into device

EXPLORING

- I'm getting tool-tips to get started with the application

Notes:

- It would be appropriate to have tool-tip for “Add sign (income)” as it would ideally be the first action as an end user
- Instead “-” and “+” signs in iOS, it would be more appropriate to have text on it (Just like in Andriod)

- I’m successfully able to navigate to “Add Income” screen after clicking “+” sign. I observed, “New Income” screen is showing calculator which is really great add-on

. 0 = /

CHOOSE CATEGORY

Notes:

- I observed that maximum length is set as 9 digits, which could be problematic for countries with high inflation rate
- “Choose Category” option button can be moved up, as it could be first operation based on which one wants to add amount

- Screen might let user to select category before adding amount for same
- “Back” button could be provided along with other buttons as user need to move up for editing values
- Scheduling option can be placed side-by-side with adding money field for easy accessibility rather than at the very top as it could be completely missed by end users initially

- I can see money is added to Balance, which can be viewed after clicking it as mentioned in tooltip for the first time

- I can easily add new expenses either by clicking on “-” sign or simply by selecting the desired category from the home page
- I can see pie chart is updated with the entry and also pointing to the added category
- Balance sheet is also displaying the same

ADD 'FOOD'

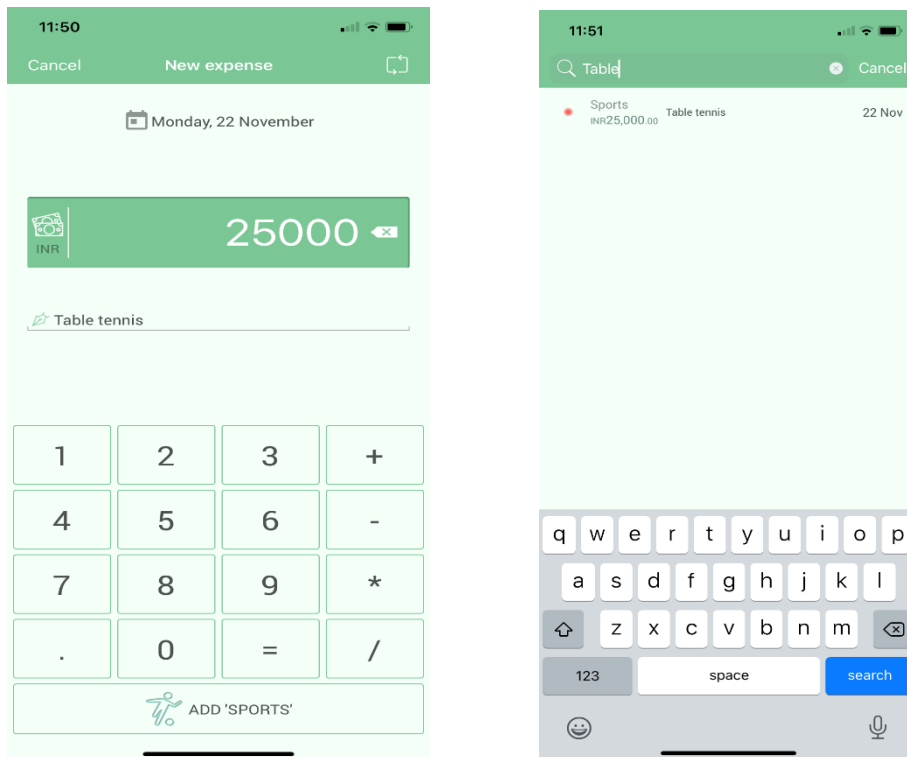

- I can easily sort by activities on the basis of day/month/year etc.
- I can also add my expense for the past day which is reflecting in balance sheet as well

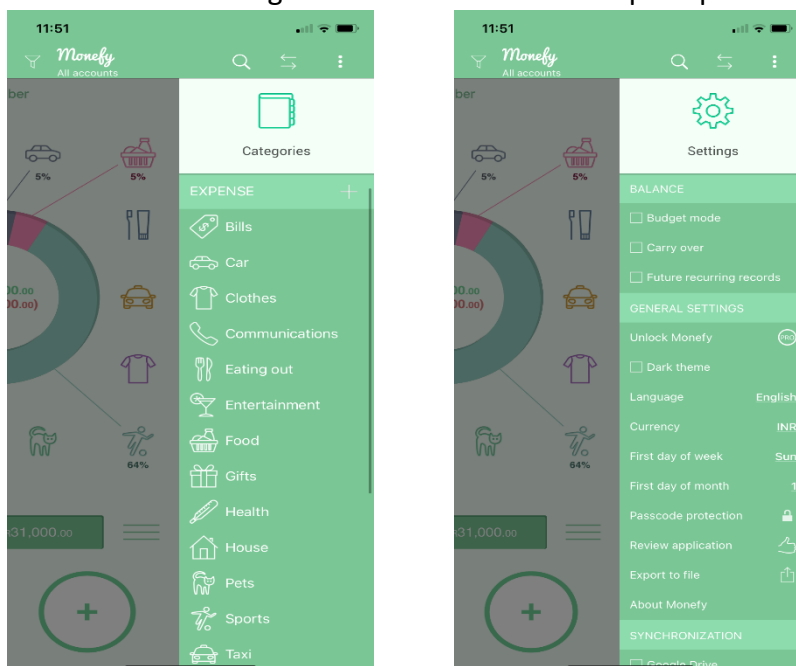

- I can also sort balance sheet on the descending order or dates
- I can edit or delete records from balance sheet

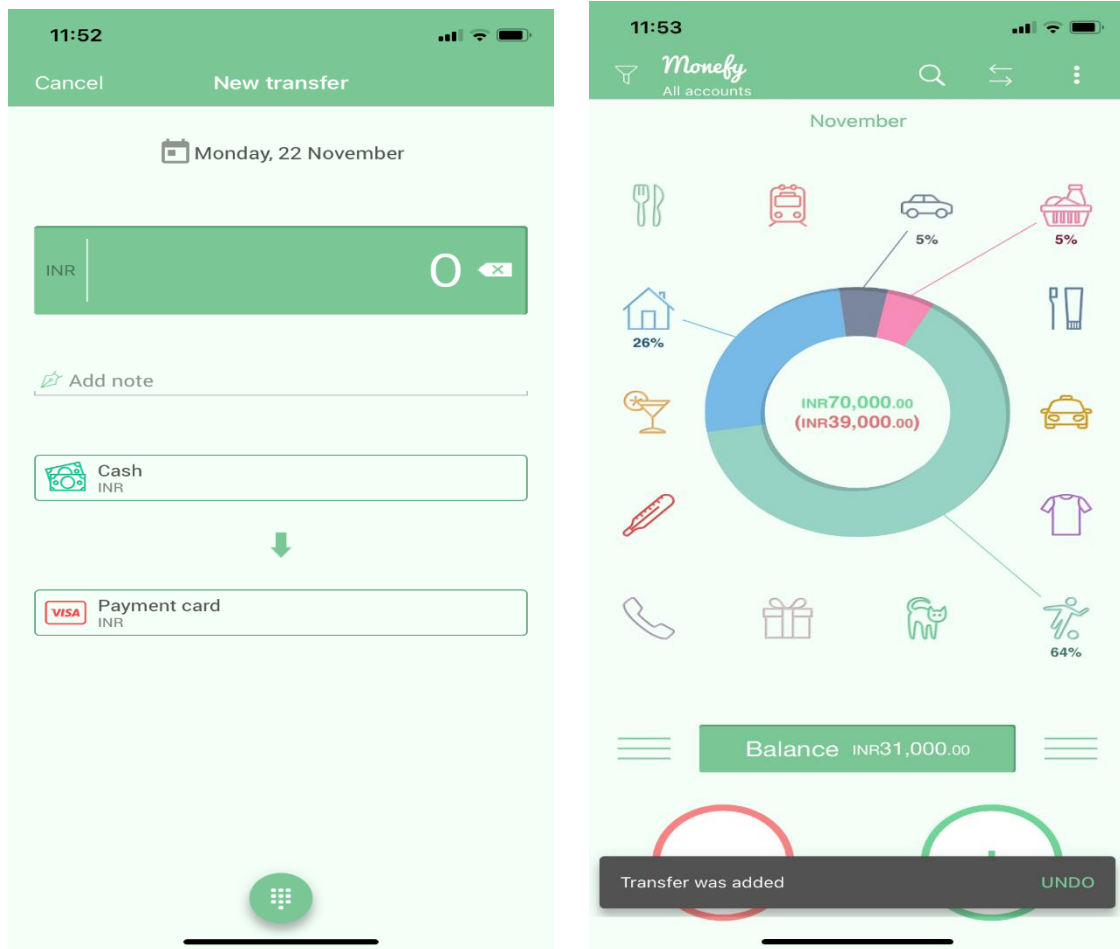

- I can add new records with notes which can be easily searched

- I can explore settings and advanced features for which user needs to pay
- I can see on selecting advanced features user is prompted to pay

- I can see Transfer option at the very top-right of screen

Notes:

- On adding transfer, Balance sheet is not getting updated. End user is not provided with sufficient information related to this option

- I can schedule my expenses and income
